TRUE STUDY

3 weeks in bed beat 30 years of aging.

> At wrecking fitness. Dallas, 1966.

Five healthy men, about 20 years old.

20 days

of bed rest, by design

Their aerobic fitness dropped hard.

🛌

20 days lying down

📉

Aerobic power falls

🔬

Measured in the lab

30 years later, researchers found the same five men.

1966 Bed rest study

1996 Retested at 50 to 51

2001 Published in Circulation

Which hurt their fitness more?

30 YEARS OF AGING

Smaller drop

3 WEEKS IN BED

Bigger drop

By 1996:

2 of 5

still exercised regularly. Body fat had more than doubled.

Then: six months of training.

2 walked

2 jogged

1 cycled

> About 4.5 hours a week by the end.

The twist:

100%

of the aerobic power lost to aging, won back

YOUR MOVE

Stillness is the expensive habit.

1. Walk after one meal today
2. Stand up once an hour
3. See a professional before hard training
