A top cancer center paid out $62 million for an AI advisor.

> The audit: not in clinical use.

October 2013: IBM Watson signs on.

Watson

Advice for doctors

> Goal: an "Oncology Expert Advisor" to help doctors choose treatments.

By Aug 31, 2016:

$62M+

paid to outside firms (UT System audit)

How the money moved

1. Kept just under board-approval level
2. Some paid from donations not yet received
3. Not tied to clear goals

IT wasn't in the loop. Then the records system changed.

> The tool needed an overhaul to work with the new medical-records software.

"Not in clinical use and has not been piloted outside of MD Anderson."

Project on hold.

WHAT IT LOOKED LIKE

An AI that failed

WHAT THE AUDIT FOUND

A rollout nobody owned

The model wasn't the only problem. Governance was.

> Who approved it, how it was paid for, and whether it fit the real systems.

YOUR CHECKLIST

9/9

Before you buy AI:

1. Tie payments to milestones
2. Bring IT in before signing
3. Pilot it in the real workflow
