About 10,000 readers told her she was wrong.

> She answered one game-show puzzle.

Nearly 1,000 of them had PhDs.

~1,000

letters from PhDs, out of about 10,000

Three doors. One car, two goats.

The host opens door 3: a goat. Switch to door 2?

> He knows where the car is, and always shows a goat.

Switch. You win 2 times out of 3.

STAY	SWITCH
Wins 1 in 3	**Wins 2 in 3**

Your first pick is right 1 time in 3. The reveal can't change that.

> So the other closed door carries the other 2 in 3.

Paul Erdős stayed unconvinced until he saw a simulation.

Steve Selvin posed it in 1975.

- **1975** Selvin's letter
- **1990** Parade column
- **~10,000** letters

When intuition and math disagree, run the test.

1. Write down your gut answer
2. Simulate it, or play it 30 times
3. Update without ego
