Tennis players lived 9.7 years longer.

> Gym regulars: 1.5 years. Here's why that gap matters.

About 8,600 Danish adults. Roughly 25 years.

8,600

adults in the Copenhagen City Heart Study

Extra years vs people who didn't exercise.

🎾 Tennis +9.7

🏸 Badminton +6.2

⚽ Soccer +4.7

Solo cardio still helped.

1. Cycling +3.7
2. Swimming +3.4
3. Jogging +3.2
4. Calisthenics +3.1

Health club workouts: +1.5 years.

TENNIS	HEALTH CLUB
+9.7 years	**+1.5 years**

The top three all need another person.

Social connection relieves stress.

> The researchers think that may matter as much as the exercise itself.

Observational, so not proof.

1. Players may differ in income
2. ...and in health and free time
3. Shows a link, not a cause

YOUR MOVE

Book one social sport this week.

1. Tennis or pickleball
2. A running club
3. Bring a friend
